Penetration Test Report: Windows 7 Reconnaissance & Enumeration

---

Target: Windows 7 Professional (VM)
IP Address: 192.168.1.99
Test Type: Reconnaissance & Enumeration
Date: 17 October 2026
Prepared by: Shardul Sapkota

1. Executive Summary

A Windows 7 virtual machine was assessed to identify exposed services and enumerate system information. The target was found to be running SMBv1 with the MS17-010 (EternalBlue) vulnerability, confirmed by Nmap vulnerability scripts. Multiple public exploits exist for this vulnerability.

2. Scope

Item	Detail
Target	Windows 7 Professional SP1 (VM)
IP Address	192.168.1.99
Attacker	Kali Linux

3. Methodology

Phase	Tools Used
Host Discovery	Nmap (`-Pn`)
Port Scanning	Nmap (`-sV -sC -O`)
Vulnerability Identification	Nmap `--script vuln`

Exploit Research	searchsploit

4. Reconnaissance Findings

4.1 Host Discovery

Host: 192.168.1.99

Status: Up

MAC: EC:75:0C:5E:16:F0 (TP-Link Systems)

4.2 Open Ports & Services

Port	Protocol	Service	Version
135	TCP	msrpc	Microsoft Windows RPC
139	TCP	netbios-ssn	Microsoft Windows NetBIOS
445	TCP	microsoft-ds	Windows 7 Professional 7601 SP1
5357	TCP	http	Microsoft HTTPAPI httpd 2.0
49152	TCP	msrpc	Microsoft Windows RPC
49153	TCP	msrpc	Microsoft Windows RPC

49154	TCP	msrpc	Microsoft Windows RPC
49155	TCP	msrpc	Microsoft Windows RPC
49156	TCP	msrpc	Microsoft Windows RPC
49157	TCP	msrpc	Microsoft Windows RPC

4.3 Operating System

Field	Value
OS	Windows 7 Professional 7601 Service Pack 1
Computer Name	WIN-S6NA075NU94
Workgroup	WORKGROUP
Architecture	x64 (CPE: cpe:/o:microsoft:windows_7::sp1:professional)

5. Enumeration Findings

5.1 SMB Shares

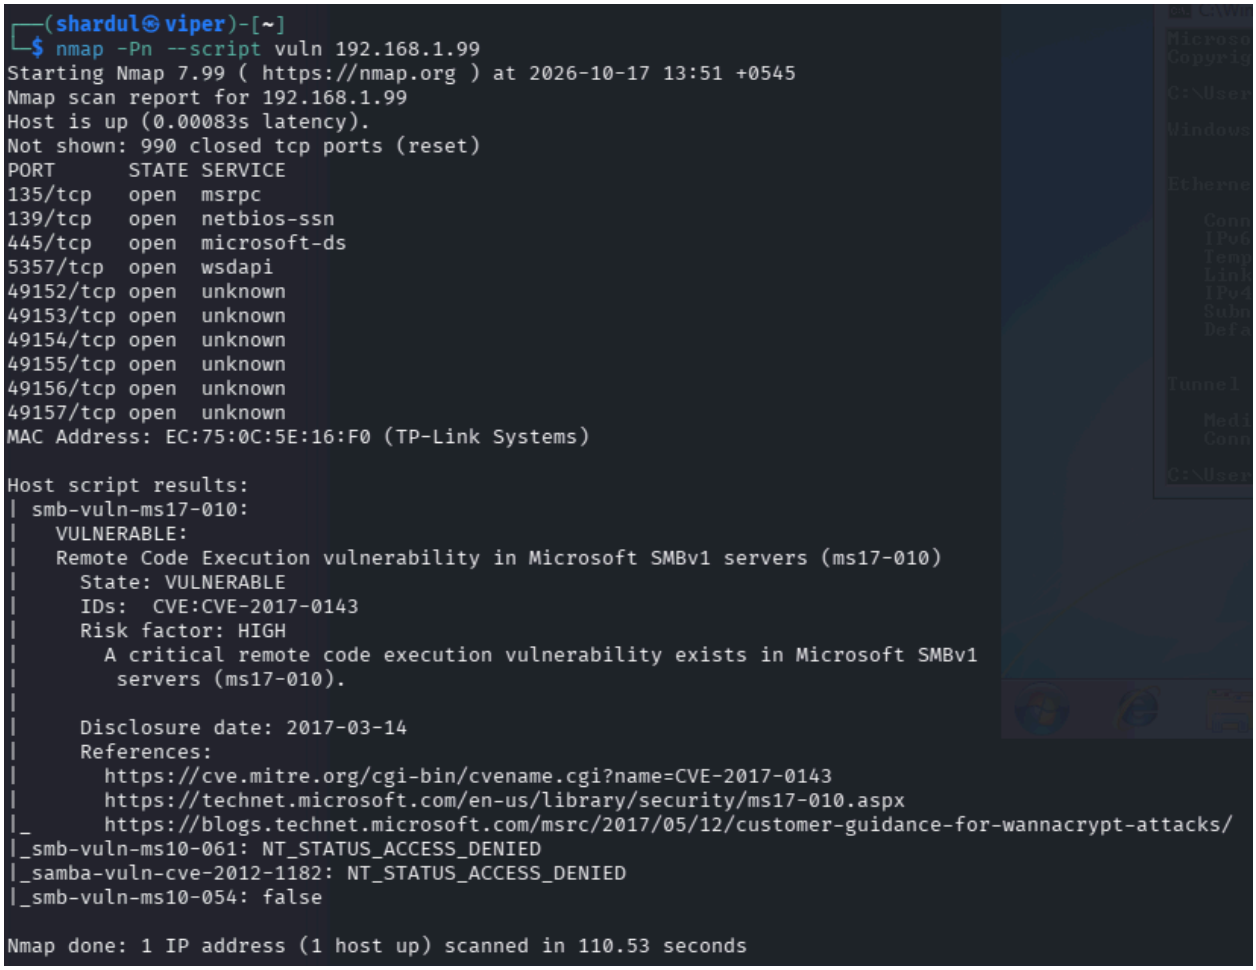

Share	Anonymous Access	Status
ADMIN$	`<none>`	Restricted
C$	`<none>`	Restricted
IPC$	READ	Normal

Note: Anonymous enumeration was denied (`NT_STATUS_ACCESS_DENIED`). Common shares were guessed by Nmap.

5.2 Vulnerability Identification

CVE	Vulnerability	Severity	Status
CVE-2017-0143	MS17-010 (EternalBlue)	Critical (9.8)	VULNERABLE

Evidence — Nmap vuln script:

Other checks:

- `smb-vuln-ms10-061`: NT_STATUS_ACCESS_DENIED (could not test)
- `smb-vuln-ms10-054`: false (not vulnerable)
- `samba-vuln-cve-2012-1182`: NT_STATUS_ACCESS_DENIED (not applicable)

6. Available Exploits

searchsploit results for MS17-010:

Exploit Title	Path
Microsoft Windows - 'EternalRomance'/'EternalSynergy'/'EternalChampion' SMB RCE (Metasploit)	windows/remote/43970.rb
Microsoft Windows - SMB RCE Scanner (MS17-010) (Metasploit)	windows/dos/41891.rb
Microsoft Windows 7/2008 R2 - 'EternalBlue' SMB RCE (MS17-010)	windows/remote/42031.py
Microsoft Windows 7/8.1/2008 R2/2012 R2/2016 R2 - 'EternalBlue' SMB RCE (MS17-010)	windows/remote/42315.py
Microsoft Windows 8/8.1/2012 R2 (x64) - 'EternalBlue' SMB RCE (MS17-010)	windows_x86-64/remote/42030.py
Microsoft Windows Server 2008 R2 (x64) - 'SrvOs2FeaToNt' SMB RCE (MS17-010)	windows_x86-64/remote/41987.py

7. Recommendations

Priority	Recommendation
Critical	Patch MS17-010 (KB4012212)
Critical	Disable SMBv1
High	Enable SMB message signing
High	Block port 445 at network perimeter
Medium	Restrict anonymous IPC$ access
Low	Upgrade from Windows 7 (EOL)

8. Conclusion

The Windows 7 target (192.168.1.99) was confirmed vulnerable to MS17-010 (EternalBlue, CVE-2017-0143). Reconnaissance and enumeration revealed exposed SMB and RPC services with multiple available exploits. SMB message signing is disabled, further increasing risk. Immediate patching and SMBv1 disablement are recommended.
